Cart Lift Folding Tables

Cart Lift Fold Tables are customarily used as ergonomic solutions for delivering bulk goods to finishing stations. Clean, dry bulk items are loaded into custom designed wire baskets from a dryer or overhead rail system. The baskets are rolled into the folding table's self-locking forks and raised by the operator gradually to dump the goods on the table. The raising of the basket is controlled by a pushbutton on the front and back of the table. Lowering is only allowed from the rear corner pushbutton station where the operator can make sure there is nothing under the basket as it comes down. The hydraulic system allows the raising and lowering to be accomplished smoothly.
